MACHINE PERMISSIBILITY CHECKLIST

Make and model No: DST650						
Engine: Cummins C8.3, Approvals: 07-EPA040001, 07-EPA12000 07-EPA140001, 07-EPA140002, 07-EPA110001						
Machine Serial Number:						
MSHA Approval Number:						
Date of Examination:						
Machine Type: Shield Hauler						
Examination Conducted By:

If an MSHA Part 36 approval plate has been affixed to this machine, it must meet the requirements of Part 36, Title 30, Code of Federal Regulations. It is the responsibility of the mine operator to ensure that this machine is maintained in permissible condition in accordance with this checklist.

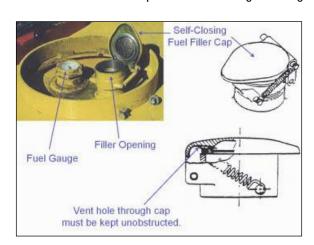

- For a complete permissibility evaluation, this checklist must be used in conjunction with a Power System Checklist, M255-001-01, Alt M332-001-01 and Electrical System Checklist, M261-008-01.
- Due to Braking Capability Limitations, this machine shall not be operated on grades greater than 20%.
- The approval plate specifies a ventilation rate of 13500 cfm for Part 7 engine approval nos. 07-EPA040001 or 07-EPA120001. 10,000 CFM for Part 7 engine approval no. 07-EPA140001. 9,000 CFM for Part 7 engine approval no. 07-EPA140002. 12,000 CFM for Part 7 engine approval no. 07-EPA110001.

The component and function checks in this document that are designated as "WEEKLY" must be performed during each weekly examination in accordance with 30 CFR, Section 75.1914.

ALL INSPECTIONS AND TESTS SHALL BE PERFORMED IN FRESH AIR.

A. <u>Fuel System</u>

Weekly	1.	[]	There are no fuel leaks.
Weekly	2.	[]	The fuel filler cap is vented and the vent is not plugged.
Weekly			The fuel filler cap is self-closing and is attached to the tank ch will prevent loss during refueling.

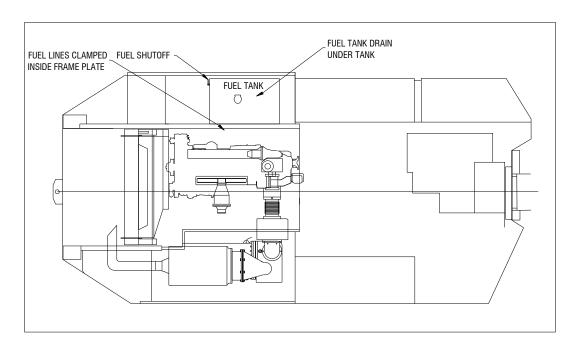

Weekly 4. [] Auxiliary fuel tank capacity has not been added to the vehicle.

M384-006-01 REV. -- DATED MAY 2018 Page 2 of 5

E-mail: eng@drysystemstech.com Web: www.drysystemstech.com

Weekly	5.	[]	Fuel filters are properly installed and are not damaged.
Weekly	6.	[]	The fuel shutoff valve in the fuel supply line is operable.
Weekly	7.	[]	The drain plug in the fuel tank is locked in position.
Weekly	8. synthe	[] tic elas	Fuel lines are either steel-wire reinforced, fire-resistant tomer-covered hose suitable for use with diesel fuel, or metal.
Weekly	9. compo	[] onents a	Fuel lines are not routed near or connected to hot exhaust and are protected from external damage.
Weekly	10.	[]	Fuel lines are secured.

B. Braking System

Warning Brake tests are to be conducted on a relatively level surface, away from traffic areas where other machines or persons may be moving about. Consider the possible consequences of testing a machine with braking inadequacies, and select an area where the test machine would not cause an accident due to these inadequacies.

NOTE: These tests must ensure service and parking brake capability equal to or greater than the maximum specified gradeability of the machine.

E-mail: eng@drysystemstech.com Web: www.drysystemstech.com

	Weekly	1.	[]	Service Brake Test.
		a.			he engine operating and the machine stationary, apply the
		b.			e all other brakes.
		C.	Pla	ace t	he transmission gear selector in third gear, low range, and the
					onal control selector in forward or reverse.
		d.		•	ss the accelerator to full throttle, allowing the engine to put the dission torque converter into a stall condition.
				•	satisfactorily, the unit will not move when the above procedure cted, the service brake must be repaired.
	Weekly	2.	[]	Parking Brake Test.
		a.			he engine operating and the machine stationary, apply the g brake.
		b.			e all other brakes.
		C.			the transmission gear selector in third gear, low range, and the control selector in forward or reverse.
		d.	De	•	ss the transmission declutch bypass valve and hold during the
		e.		•	ss the accelerator to full throttle, allowing the engine to put the dission torque converter into a stall condition.
				_	satisfactorily, the unit will not move when the above procedure ected, the parking brake must be repaired.
Misc	<u>ellaneous</u>				
	Weekly	1. extinguis			The vehicle is equipped with at least one dry chemical fire haminimum of a 10A:60B:C NFPA rating. All fire extinguishers d.
		*2. accorda mainten	nce	e v	The fire suppression system is tested and maintained in with its manufacturer's recommended inspection and cogram.

E-mail: eng@drysystemstech.com Web: www.drysystemstech.com

Weekly	*3. [] The fire suppression system is operable as determined by the following checks:							
	 a. Note general appearance of system components for mechanical damage or corrosion. b. Check hose fittings and and nozzles for mechanical damage and cuts. c. Nozzles are protected against the entrance of foreign materials such as mud, coal dust or rockdust. Check nozzle openings; slot on nozzles should be closed with silicone grease or covered with a plastic blow off cap. d. The lead or wire seals are installed on all manual actuators. (If missing, refer to fire suppression system manufacturer's inspection manual for inspecting actuator gas cartridges.) 							
Weekly	4. [] The machine has a legible MSHA Part 36 approval plate attached to it in the operator's compartment.							
Weekly	5. [] The machine is equipped with a neutral start and it is functioning properly. The engine will not start when the transmission selector is in the forward or reverse position.							

^{*}Fire suppression system is optional for machines operating in metal/nonmetal mines.
